

Build HTML Page

Step 1: Open the Text Editor

In this step, we have to open any text editor such as Notepad or Notepad++ for writing an HTML code.

Step 2: Type the HTML code.

In this step, we have to type the HTML code in the text editor.

1. `<HTML>`
2. `<HEAD>`
3. `<!--`
- The Head tag is used to create a title of web page, CSS syntax for a web page, and helps in written a JavaScript code. `-->`
4. `</HEAD>`
5. `<BODY>`
6. `<!--`

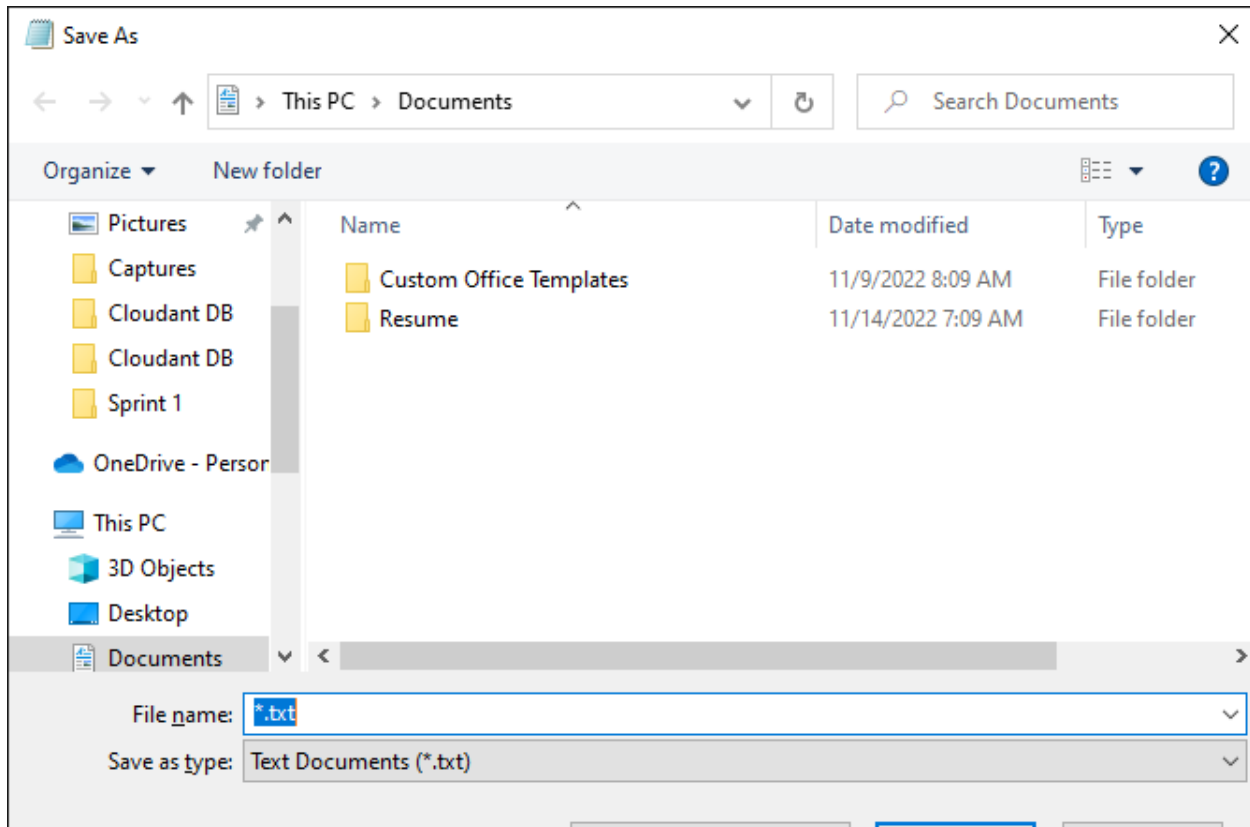

- The Body tag is used to display the content on a web page, which is specified between the body tag. -->

7. `</BODY>`

8. `</HTML>` `<!--` It is the opening tag of any HTML `-->`

Step 3: Save the HTML code.

After typing the complete HTML code, we have to save that file in a folder with **.html** extension.

Step 4: Run the HTML file.

At the last step, we have to execute or run HTML file from the location where we saved the file. The file will run on a default browser.
